

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A computer-implemented method for linking a semiconductor product manufacturing facility order with a quotation, the method comprising:
receiving the quotation including at least a first product and its quote amount;
storing the quote amount associated with the first product in a quotation database;
storing predetermined information associated with the first product in a product database;
updating a mapping database record associated with the first product with the
predetermined information from the quotation database and the product database
associated with the first product, wherein the mapping database associates
information of the quotation from the quotation database with information of the
first product from the product database;
receiving the product manufacturing facility order that identifies at least the first product
and desired quantity; [[and]]
~~calculating an order price associated with the first product by~~
~~accessing the stored quote amount associated with the first product, and~~
~~determining the order price based on the quote amount associated with the~~
~~first product and the desired quantity identified in the product~~
~~manufacturing facility order~~
retrieving a mapping database record associated with the first product from the mapping
database; and
calculating an order price based on the mapping database record comprising the quote
amount associated with the first product, and the desired quantity identified in the
product manufacturing facility order.
2. (Original) The computer-implemented method of claim 1 wherein the product manufacturing facility is a semiconductor foundry.

3. (Cancelled).
4. (Currently Amended) The computer-implemented method of claim [[3]] 1, and ~~further comprising:~~
~~storing predetermined information associated with the first product in a product database;~~
~~updating a mapping database with predetermined information from the quotation database~~
~~and the product database associated with the first product;~~
~~wherein the order price is calculated by accessing the quote amount from~~
~~determining the order price based on the quote amount from the mapping database~~
~~associated with the first product and the quantity identified in the product~~
~~manufacturing facility order wherein the product manufacturing facility order is~~
~~created by a customer using a graphical user interface.~~
5. (Currently Amended) The computer-implemented method of claim [[4]] 1, wherein the mapping database is updated automatically when the quotation database is changed.
6. (Currently Amended) The computer-implemented method of claim [[5]] 1, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a database trigger.
7. (Currently Amended) The computer-implemented method of claim [[5]] 1, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a auto-call function.
8. (Currently Amended) The computer-implemented method of claim [[4]] 1, wherein the mapping database is updated automatically when the product database is changed.

9. (Currently Amended) The computer-implemented method of claim 1, further comprising:

- receiving a quote amount for a second product;
- storing the quote amount associated with the second product; and
- calculating an order price associated with the second product, wherein the received [[the]] product manufacturing facility order identifies at least the first product and the second product and desired respective quantities, by
 - accessing the stored quote amount associated with the second product, and
 - determining the order price for the second product based on the stored quote amount associated with the second product and the desired quantity identified in the product manufacturing facility order.

10. (Original) The computer-implemented method of claim 9, wherein the quote amount associated with the first product and the quote amount associated with the second product are in the same quotation.

11. (Currently Amended) A computer-implemented method for linking a semiconductor product manufacturing facility order with a quotation, the method comprising:

- receiving the quotation including at least two products and their respective quote amounts;
- storing the two quote amounts of the at least two products in a quotation database;
- storing predetermined information associated with a first product and a second product of the at least two products in respective product database records in a product database;
- updating respective mapping database records in a mapping database with the predetermined information from the quotation database records and the respective product database records associated with the first product and the second product, wherein the mapping database associates information of the quotation from the

quotation database with information of the at least two products from the product database;

receiving the product manufacturing facility order that identifies at least the two products and their respective desired quantities; [[and]]

~~calculating order prices associated with the at least two products by~~

~~accessing the quote amounts associated with the products, and~~

~~determining the order prices based on the respective quote amounts~~

~~associated with the products and their respective desired quantities~~

~~identified in the product manufacturing facility order~~

retrieving the respective mapping database records from the mapping database; and

calculating a total order price based on the respective mapping database records

comprising the two quote amounts of the at least two products, and their

respective desired quantities identified in the product manufacturing facility order.

12. (Original) The computer-implemented method of claim 11, wherein the product manufacturing facility is a semiconductor foundry.

13. (Cancelled).

14. (Currently Amended) The computer-implemented method of claim [[13]] 11, further comprising:

~~storing predetermined information associated with the first product and second product in respective product database records;~~

~~updating respective mapping database records in a mapping database with predetermined information from the quotation database records and the product database records associated with the first product and second product;~~

~~wherein the order prices are calculated by accessing the quote amounts from the respective mapping database records associated with the products and determining the~~

~~order prices based on the quote amounts from the mapping database records associated with the products and the respective quantities identified in the product manufacturing facility order wherein the product manufacturing facility order is created by a customer using a graphical user interface.~~

15. (Currently Amended) The computer-implemented method of claim [[14]] 11, wherein the mapping database is updated automatically when the quotation database is changed.

16. (Currently Amended) The computer-implemented method of claim [[15]] 11, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a database trigger.

17. (Currently Amended) The computer-implemented method of claim [[15]] 11, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a auto-call function.

18. (Currently Amended) The computer-implemented method of claim [[14]] 11, wherein the mapping database is updated automatically when the product database is changed.

19. (Currently Amended) A computer-readable medium having stored thereon sequences of instruction for responding to a request for linking a semiconductor product manufacturing facility order with a quotation, the sequence of instructions including instructions for performing the steps of:

receiving the quotation including at least a first product and its quote amount;

storing the quote amount in a quotation database;

storing predetermined information associated with the first product in a product database;

updating a mapping database record associated with the first product with the
predetermined information from the quotation database and the product database
associated with the first product;

receiving the product manufacturing facility order that identifies at least the first product
and desired quantity; [[and]]

~~calculating an order price associated with the first product by
accessing the quote amount associated with the first product, and
determining the order price based on the quote amount associated with the
first product and the quantity identified in the product manufacturing
facility order~~

retrieving a mapping database record associated with the first product from the mapping
database; and

calculating an order price based on the mapping database record comprising the quote
amount associated with the first product, and the desired quantity identified in the
product manufacturing facility order.

20. (Original) The computer-readable medium of claim 19, wherein the product
manufacturing facility is a semiconductor foundry.

21. (Cancelled).

22. (Currently Amended) The computer-readable medium of claim [[21]] 19, the
~~sequence of instructions further comprises instructions for performing the steps of:~~
~~storing predetermined information associated with the first product in a product database;~~
~~updating a mapping database with predetermined information from the quotation database~~
~~and the product database associated with the first product;~~
~~wherein the order price is calculated by accessing the quote amount from the~~
~~mapping database associated with the first product and determining the~~

~~order price based on the quote amount from the mapping database
associated with the first product and the quantity identified in the product
manufacturing facility order wherein the product manufacturing facility
order is created by a customer using a graphical user interface.~~

23. (Currently Amended) The computer-readable medium of claim [[22]] 19, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a database trigger

24. (Currently Amended) The computer-readable medium of claim [[22]] 19, wherein the mapping database is updated automatically when a new quotation is entered into the quotation database utilizing a auto-call function.

25. (Currently Amended) The computer-readable medium of claim [[22]] 19, wherein the mapping database is updated automatically when the product database is changed.

26. (Currently Amended) A system for linking a product manufacturing facility order with a quotation, the system comprising:
a quotation entry device for entering the quotation that includes at least a first product and its quote amount;
a quotation database connected to the order entry device for storing the quotation;
a product database configured to receive product information of the first product; and
a mapping database that interfaces with both the quotation database and the product database capable of storing quotation information associated with the first product;
memory connected to the [[data]] quotation entry device configured to receive ~~the quote amount~~ a mapping database record associated with the first product from the mapping database;

an order entry device for entering the product manufacturing facility order that identifies at least the first ordered product and ~~[[the]]~~ a desired quantity; and
a price calculator configured to receive the product manufacturing facility order from the order entry device, to access the memory to identify the quote amount associated with the first ordered product from the mapping database record, and to calculate a price for the first ordered product based on the desired quantity and the quote amount.

27. (Original) The system of claim 26, wherein the product manufacturing facility is a semiconductor foundry.

28. (Currently Amended) The system of claim 26, wherein the ~~memory comprises a quotation database connected to the order entry device;~~
~~a product database configured to receive product information; and~~
~~a mapping database that interfaces with both the quotation database and product database~~
capable of storing information associated with the product manufacturing facility order is created by a customer using a graphical user interface.

29. (Currently Amended) The system of claim ~~[[28]]~~ 26, wherein the quotation database additionally comprises
an automatic updating mapping database mechanism which updates the mapping database when the quotation database is changed.

30. (Currently Amended) The system of claim ~~[[28]]~~ 26, wherein the product database additionally comprises
an automatic updating mapping database mechanism which updates the mapping database when the product database is changed.

31. (Original) The system of claim 26, wherein the quotation entry device and the order entry device comprise a single device.

32. (Original) The system of claim 31, wherein the single device is a personal data assistant.

33. (Original) The system of claim 26, wherein the quotation entry device is connected to the memory via a wireless connection.

34. (Original) The system of claim 26, wherein the order entry device is connected to the price calculator via a wireless connection.
